

Pull-Type Cylinders
single acting with spring return,
max. operating pressure 500 bar

Tolerances for length and angle dimensions as per DIN 7168-m

Material

Piston: case-hardening steel, hardened
Cylinder body: high alloy steel

Important notes

If there is a possibility that aggressive cutting lubricants and coolants penetrate through the sintered metal air filter into the cylinder's interior, a vent hose has to be connected and be placed in a protected position.
Operating conditions, tolerances and other data see data sheet A 0.100.
It is absolutely necessary to follow the instructions for venting of the spring area on data sheet G 0.110

Cylinders must be supported at the front for operating pressures exceeding 160 bar
